

Make It So Studios Releases First Triv-ology™ app: Trivia Replacement Questions

June 21, 2013 – Fredericton, NB – Unimpressed with the quality of most mobile trivia games, the developers at Make It So Studios are creating their own line of trivia apps under the brand Triv-ology™. The flagship product, Trivia Replacement Questions, is being released today for iPhone, iPod Touch, and iPad. The app is free to download from the iTunes App Store, and additional trivia categories available as a one-time In-App purchase.

Trivia Replacement Questions is not a typical game, but an expansive collection of quality trivia questions and answer cards organized by category. The app can be used with your favorite trivia board game or while hanging out with friends – perfect if you have exhausted the questions the came with a board game, or some players dislike a category and would prefer to choose a different one. On release, the app has over 1600 questions in 21 categories. The free categories are Geography, Entertainment, History, Literature, Science, and Sports. Addition categories, available through a one-time in-app purchase, include: People, Star Trek (unofficial), Oscars, World Capitals, Name the TV Show, and more!

Triv-ology™ is a brand and product line of trivia apps and games developed by Make It So Studios. The flagship app, Trivia Replacement Questions, gives access to our whole database of trivia questions. Other apps in the product line will be games each focused on one category. Instead of using multiple choice, Triv-ology™ games have a letter-slot input method designed for fun and challenging mobile device play.

Make It So Studios has been designing, developing, and marketing mobiles apps for over two years. Trivia Replacement Questions will be their twentny first (21) app in the iTunes App Store. They are located in downtown Fredericton, New Brunswick, Canada. The core designers and programmers of Make It So Studios are brothers Tim and Geoff Davidson. In development their areas of focus have been graphics processing, multimedia, games, OpenGL and social media integration.
